

LLM Security & Red Teaming Masterclass

 7:00 PM – 11:00 PM (IST)

 01–02 November 2025

2 Days

Hands-on Sessions

15+ AI Tools

Online

 Hugging Face

 LangChain

 cleverhans

 art-ai

 Academy Leaps

 TensorFlow

 OpenAI

 LM Studio

 Ollama

Why Attend This Masterclass?

Large Language Models (LLMs) are transforming industries—but with innovation comes new vulnerabilities and attack surfaces. This intensive 2-day masterclass blends foundational knowledge with practical red-teaming techniques, equipping you to test, defend, and secure AI systems using real-world adversarial strategies.

Key Takeaways

8 CPE Credits Issued on Completion

Guidance from Seasoned Practitioners

Attack & Defense Playbooks

Interactive Red Team Labs

Actionable Security Techniques

15+ Cutting-Edge AI Tools

Speakers Lineup

Avnish

7+ Years of Experience

AI Security Expert | Information Security | Cloud Security |
Data Security | Consultant & Trainer

Summary

Avnish is an experienced Information security & Cloud Security Consultant and Trainer with over 7 years of expertise, specializing in cloud security, AI-assisted threat detection and securing AI systems. He has delivered tailored training globally across various sectors, equipping professionals with practical cybersecurity, cloud security and AI security skills.

Ashish

10+ Years of Experience

AI Red Teaming Expert | Network+ | Security+ | Pentest+ |
CEH | CND | ECSA | CCNA | ECDE | CPENT | LPT | OSCP

Summary

Ashish is a cybersecurity and network security trainer who delivers 30+ programs annually to professionals worldwide. He has expertise in vulnerability assessments, penetration testing, OSINT, threat intelligence, digital forensics, and AI-powered security training, equipping learners with skills in machine learning-based threat detection and anomaly analysis. Known for strong exam success rates and customized content, he has trained government and corporate clients in CCNA, CEH v11, Pentest+, Linux+, Microsoft Windows Server 2016, and more, while guiding professionals in network administration, troubleshooting, traffic analysis, and defense against evolving threats.

Masterclass Agenda

Day 1: Introduction to AI and LLM Security by Avnish (7 PM – 11 PM)

- Demystifying the core concepts and components of an AI system
- Types of AI Systems: Machine Learning, Deep Learning, Generative AI, Agentic AI
- Building and deploying AI – Model Development Lifecycle
- Understanding LLMs: Transformer Architecture, Pre-training and Fine Tuning
- LLM Applications: Chatbots, Code Generation, Cybersecurity Use Cases
- AI and GenAI Frameworks: Scikit-learn, Tensorflow, AutoML, Hugging Face, LangChain, Llamaindex, OpenAI API, Ollama, LMStudio
- Security Considerations while Developing and Deploying AI Systems

Day 2: AI and LLM Red Teaming by Ashish (7 PM – 11 PM)

- Introduction to AI Red Teaming – What is it and why it is needed?
- Attack Families for AI Red Teaming: Poisoning, Injection, Evasion, Extraction, Availability, Supply Chain
- **LLM01:** Prompt Injection – Direct and Indirect
- **LLM02:** Sensitive Information Disclosure – Data exfiltration
- **LLM03:** Supply Chain – Malicious Packages and Models
- **LLM04:** Data and Model Poisoning – Poisoning datasets and models during training and fine-tuning
- **LLM05:** Improper Output Handling – Injection via model outputs
- **LLM06:** Excessive Agency – Agents with dangerous privileges
- **LLM07:** System Prompt Leakage – Exposing hidden system instructions through crafted queries
- **LLM08:** Vector and Embedding Weaknesses
- **LLM09:** Misinformation – Detecting Hallucinations
- **LLM10:** Unbounded Consumption – Resource abuse and DOS Attacks
- **Tools and Frameworks for LLM Red Teaming:** Cleverhans, Foolbox, Adversarial Robustness Toolbox
